Practical – session 2

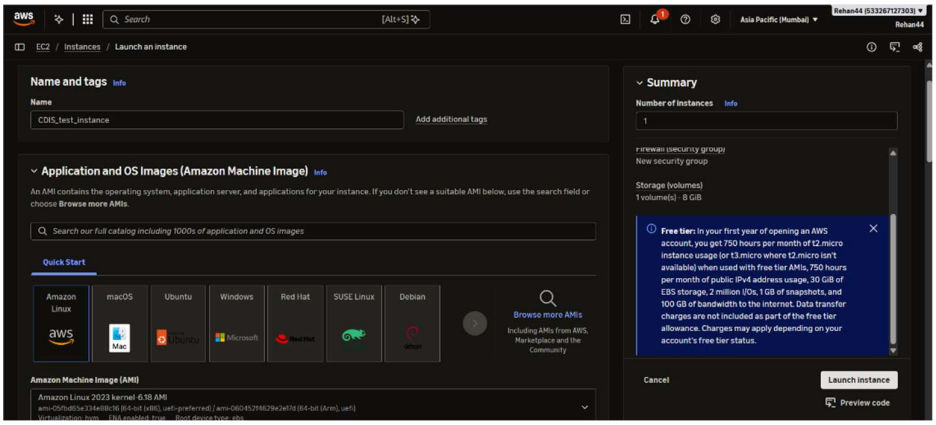

a) Enabling Multi-Factor Authentication to Secure Your Access

AWS IAM account details showing the successful configuration of Multi-Factor Authentication (MFA) using an authenticator application.

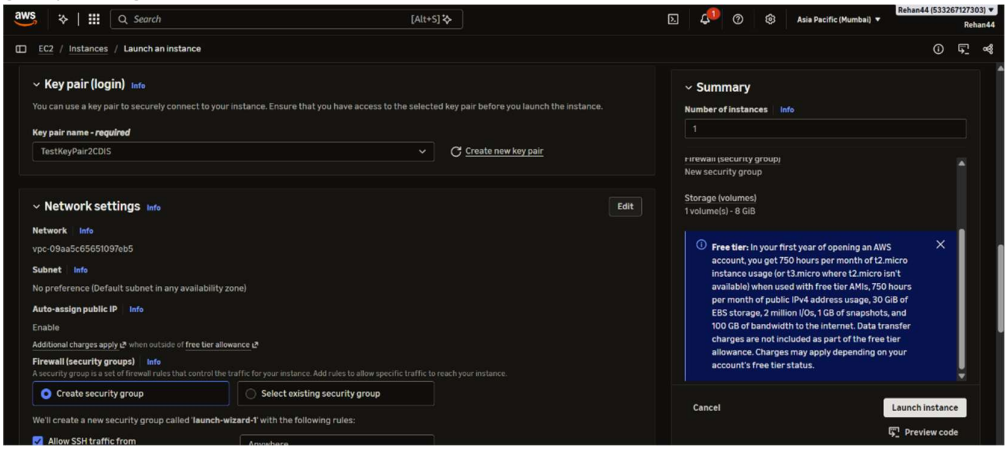

b) Creating First Linux Instance

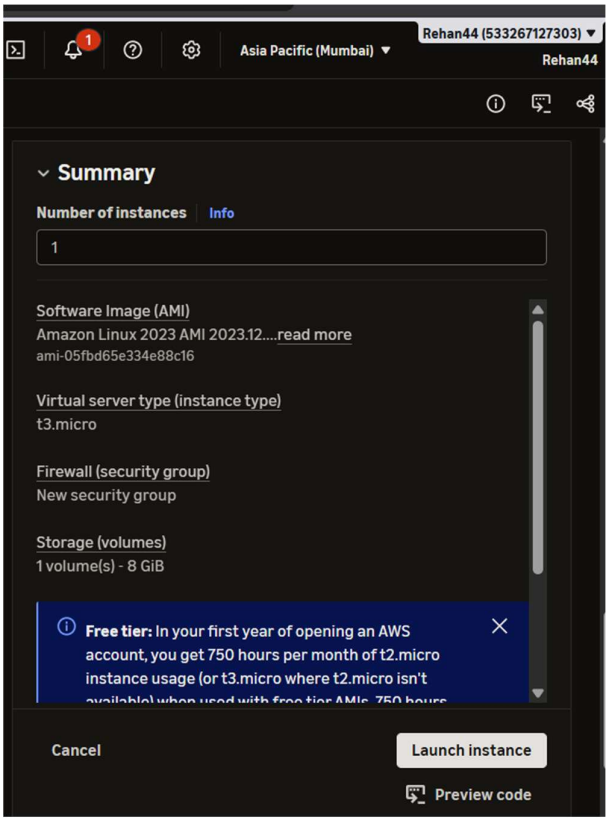

Configuring a new EC2 instance by specifying the instance name and selecting the Amazon Linux AMI.

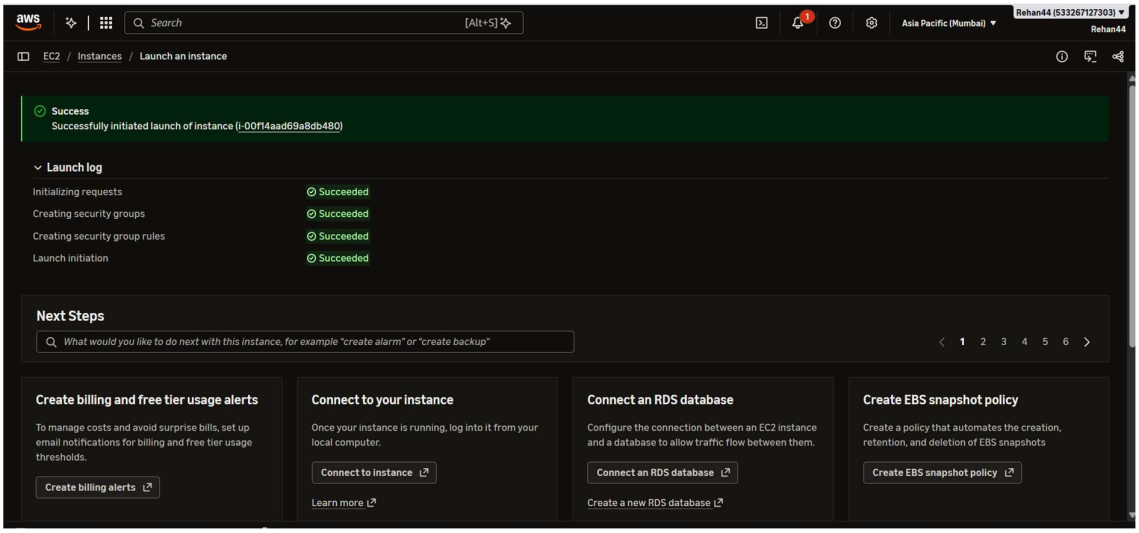

Configuring the EC2 instance by selecting the key pair and setting up network and security group configurations.

Reviewing the EC2 instance launch summary, including the instance type, AMI, security group and storage configuration.

Successful launch of the Amazon EC2 Linux instance, confirmed through the AWS console.

Connecting to the newly created Amazon Linux instance through the EC2 Instance Connect terminal.

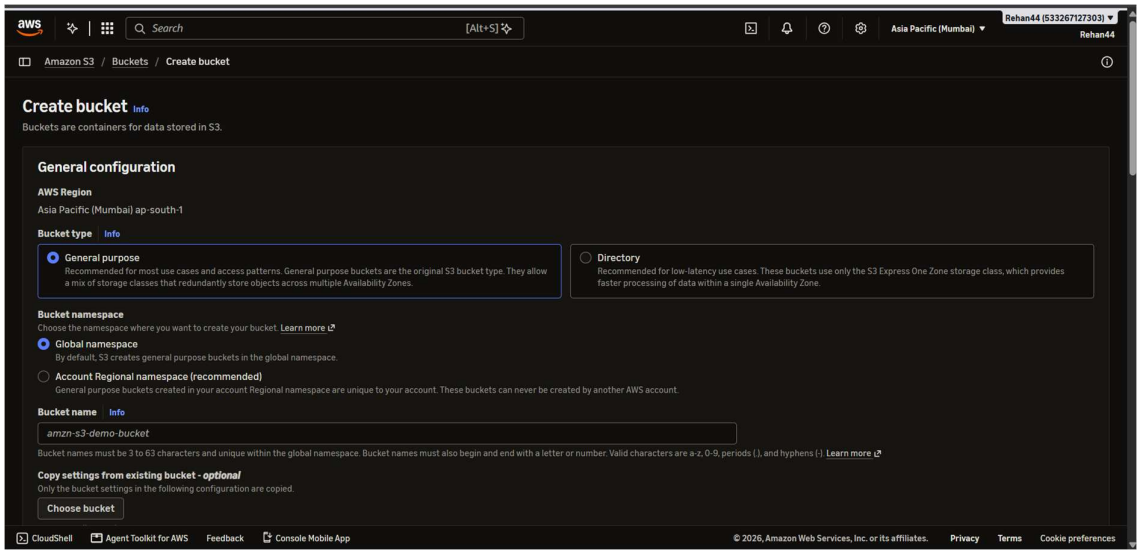

Executing basic Linux commands to verify terminal access and explore the command-line environment.

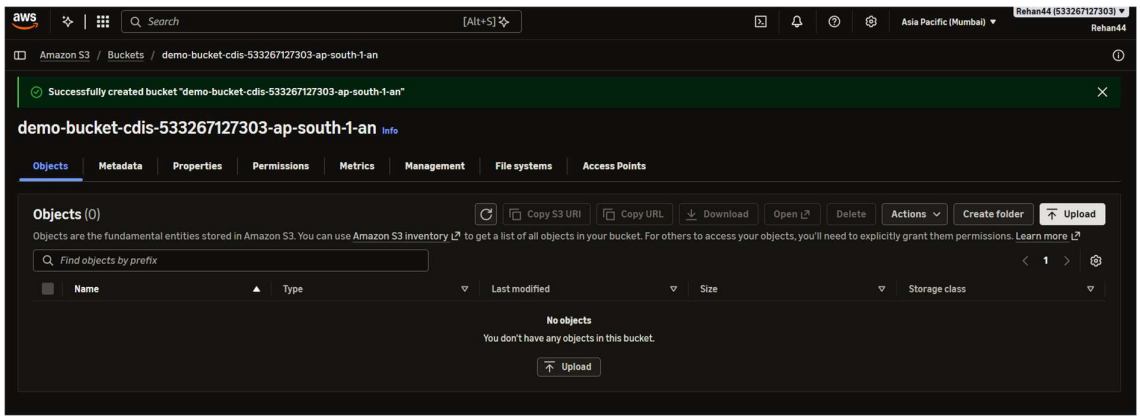

c) S3 Bucket Creation and Upload Objects

I. Create an S3 Bucket for file storage

Configuring a new Amazon S3 bucket by specifying its name and selecting the required bucket settings.

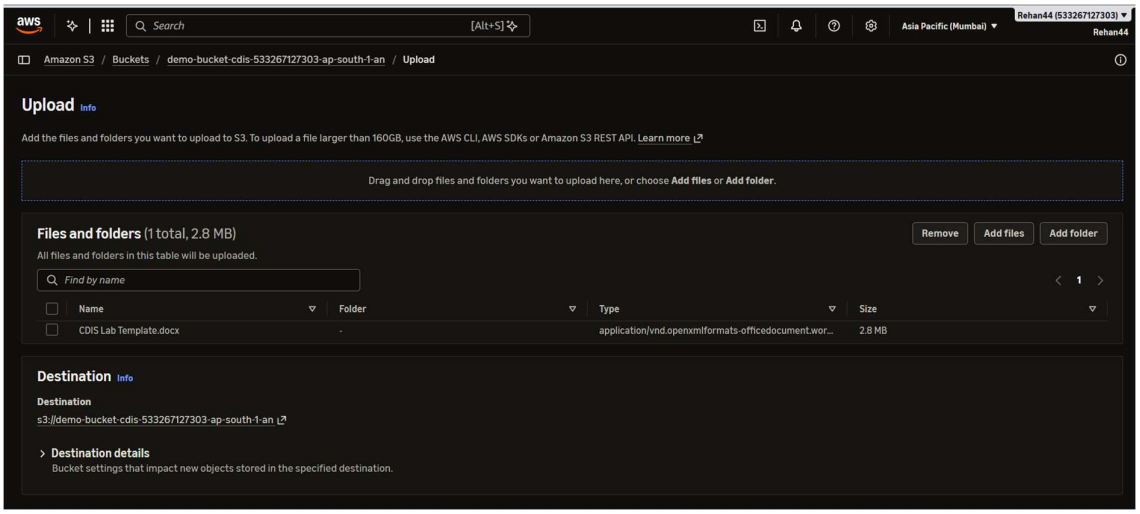

Successful creation of the S3 bucket, with the bucket displayed in the Amazon S3 console.

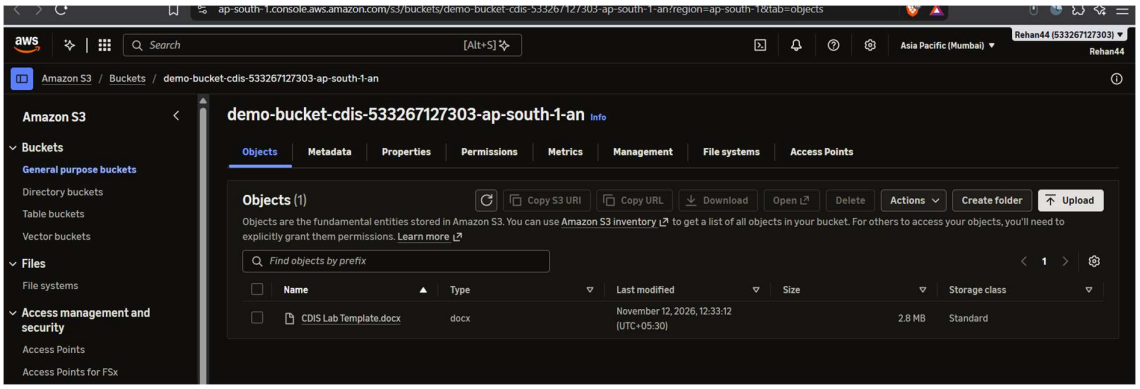

II. Upload 5 objects with different file extensions

Selecting files with different extensions for uploading to the newly created S3 bucket.

Verifying the uploaded objects in the S3 bucket through the AWS console.

Opening the link an incognito tab to check whether the documents uploaded are accessible and downloadable.
